Shared File System using AWS EFS case study 1 & 2

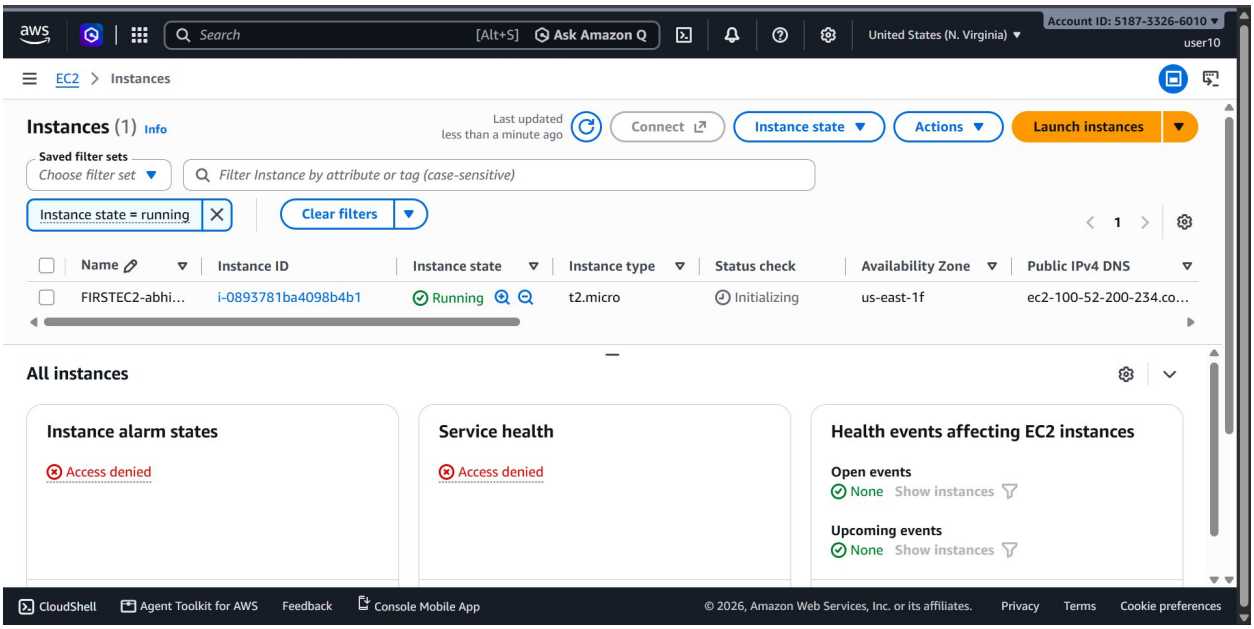

File System is created

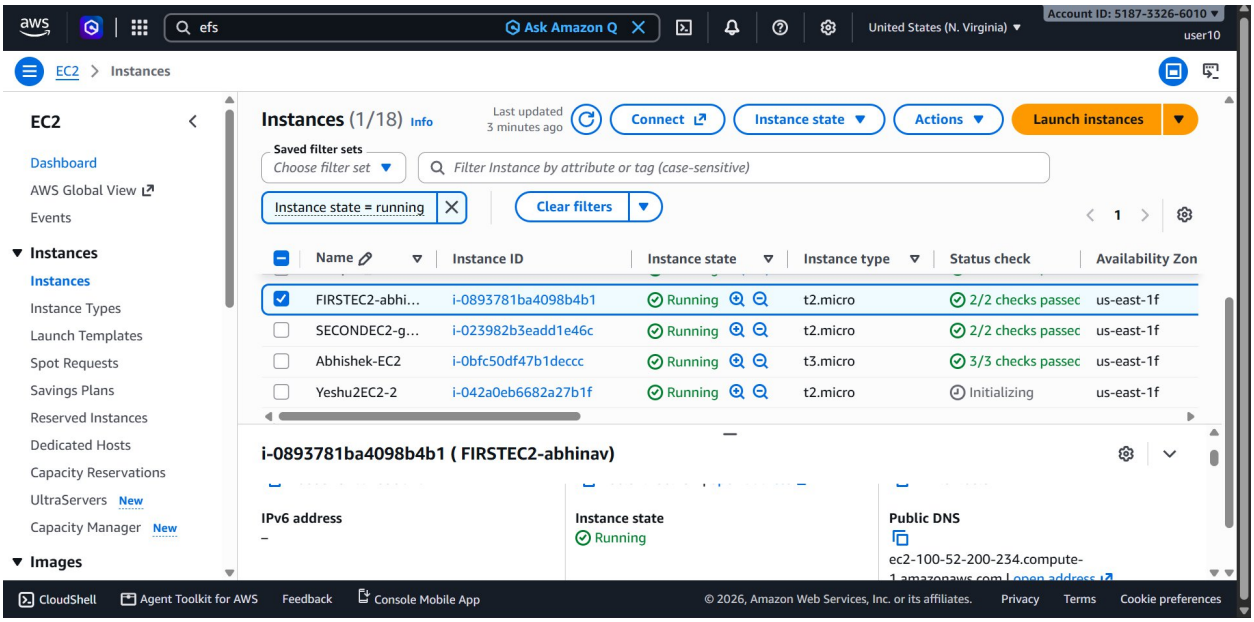

remove default security group -> add security group created in previous steps with NFS protocol.

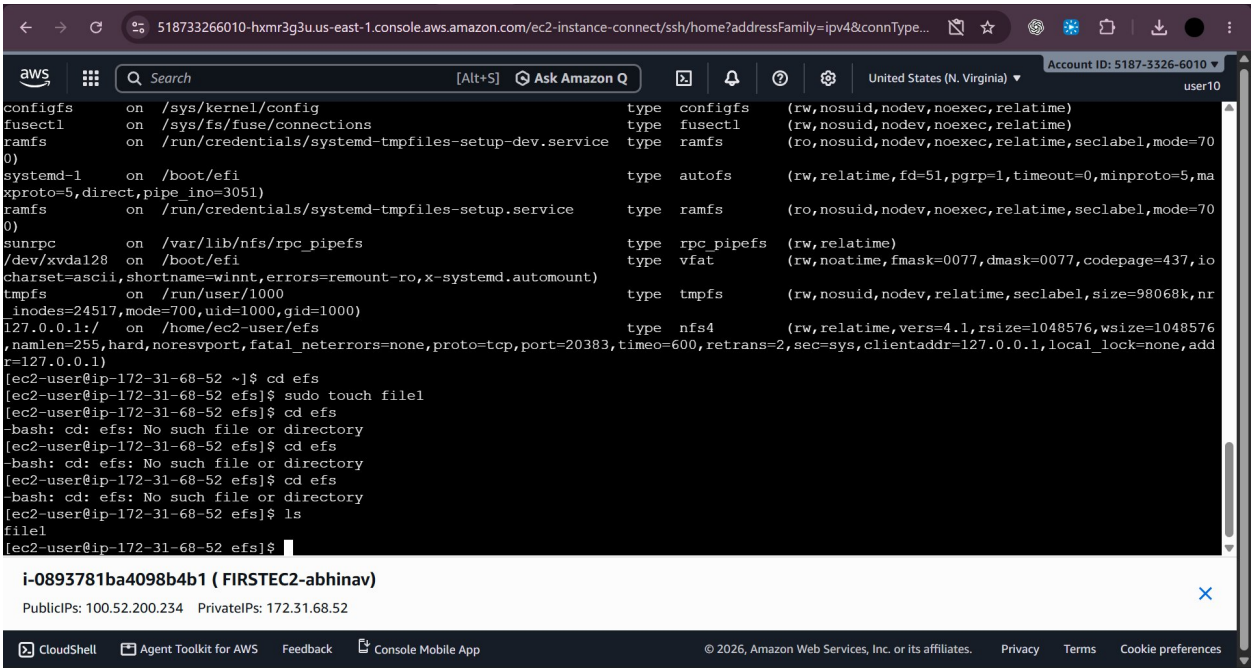

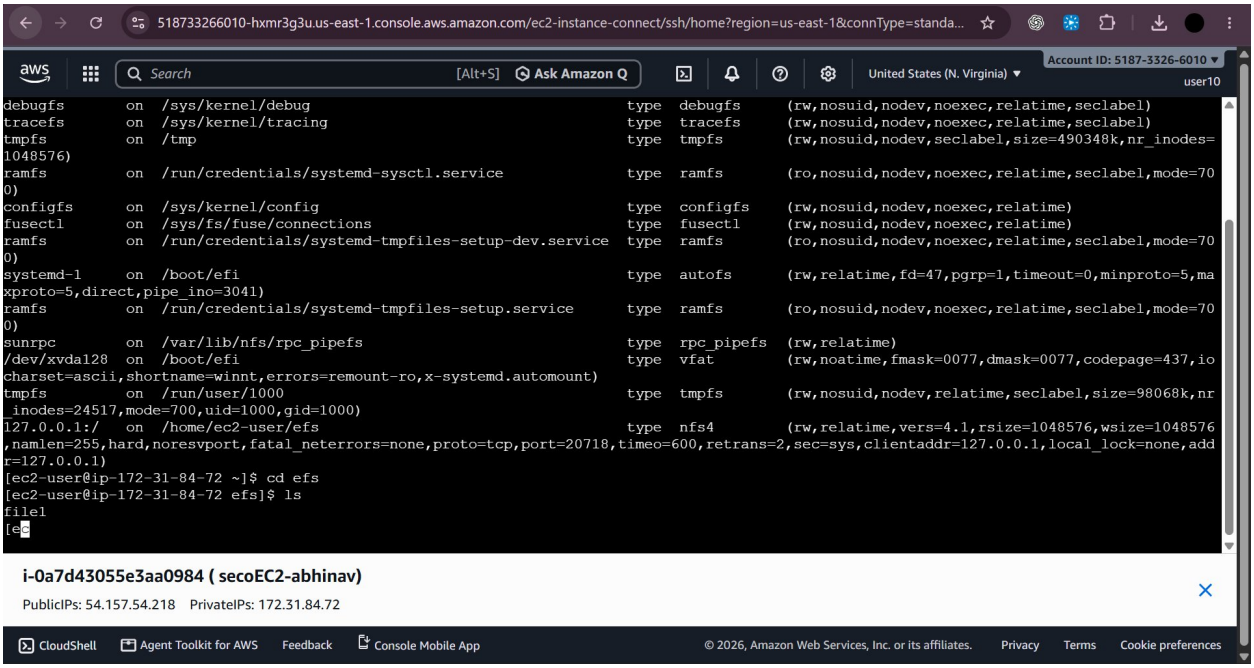

Created ec2 1 and ec2 2

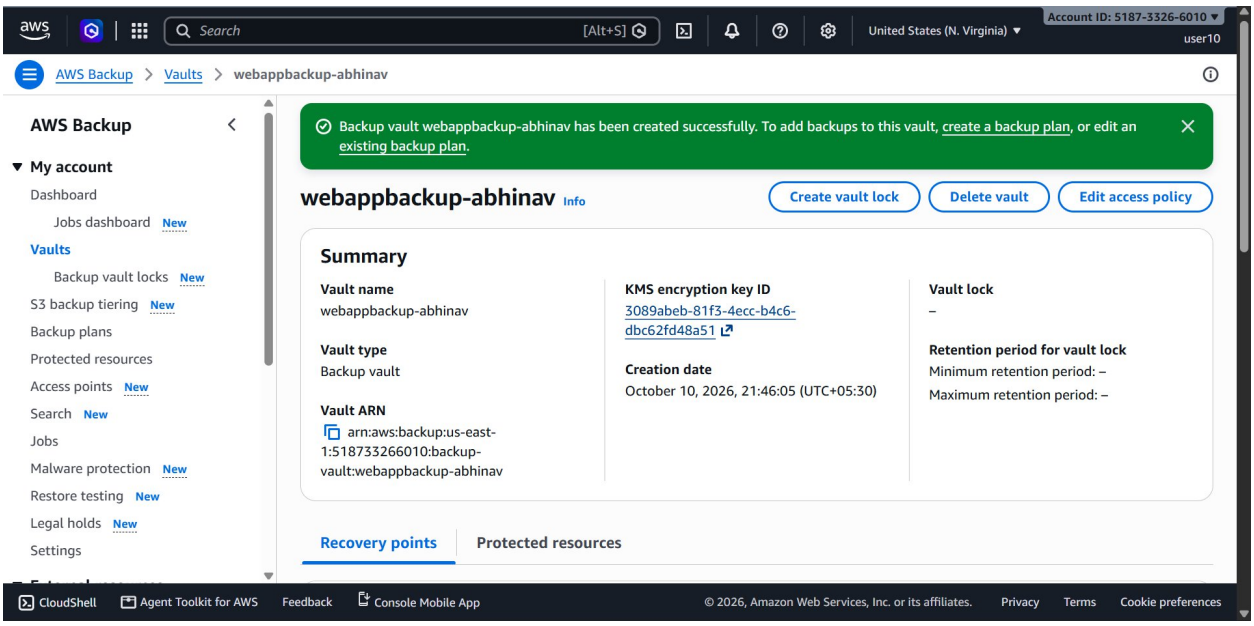

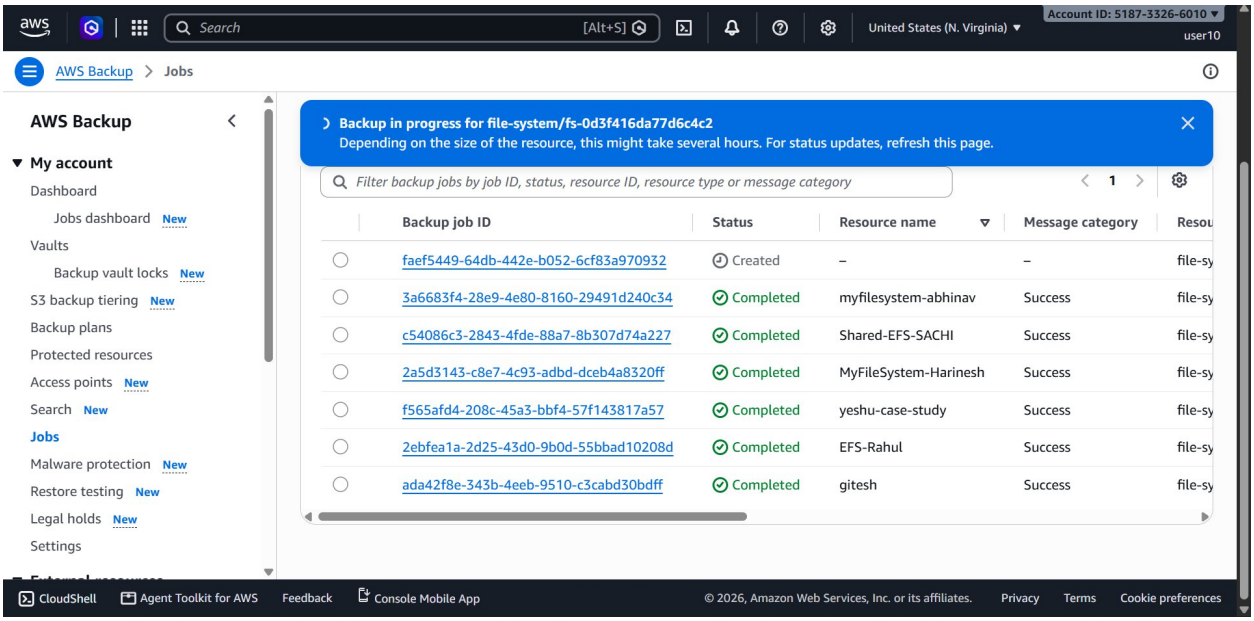

access file1 created by FIRSTEC2 through SECONDEC2. Hence, shared file system is working with both EC2.

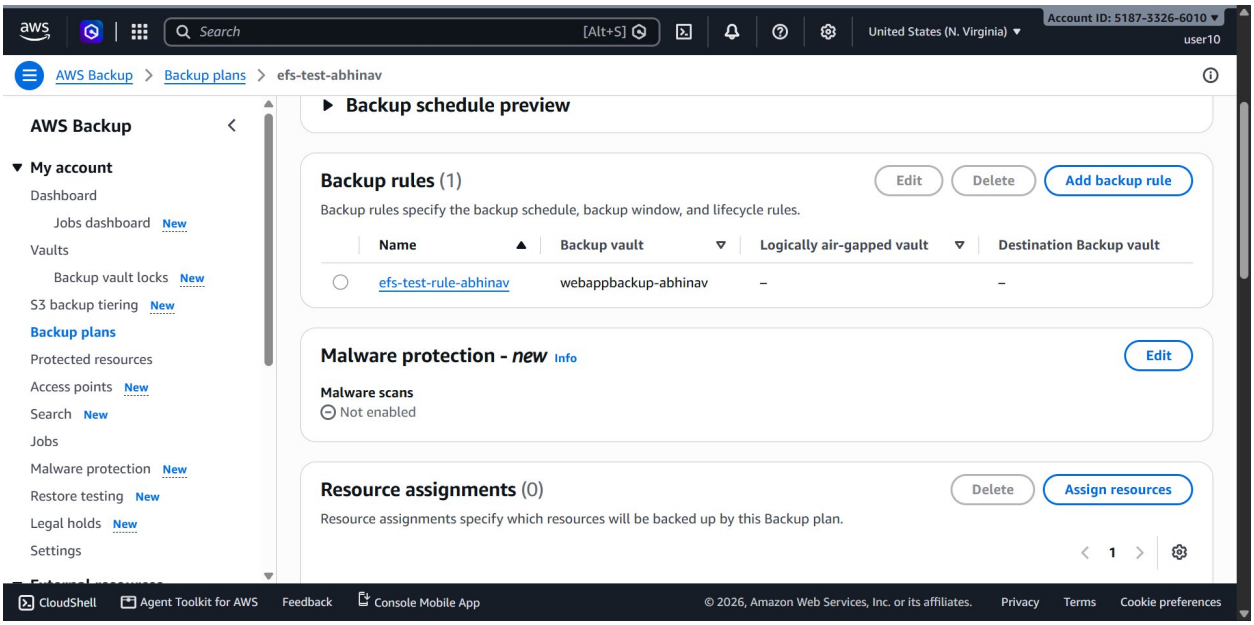

Created valuts

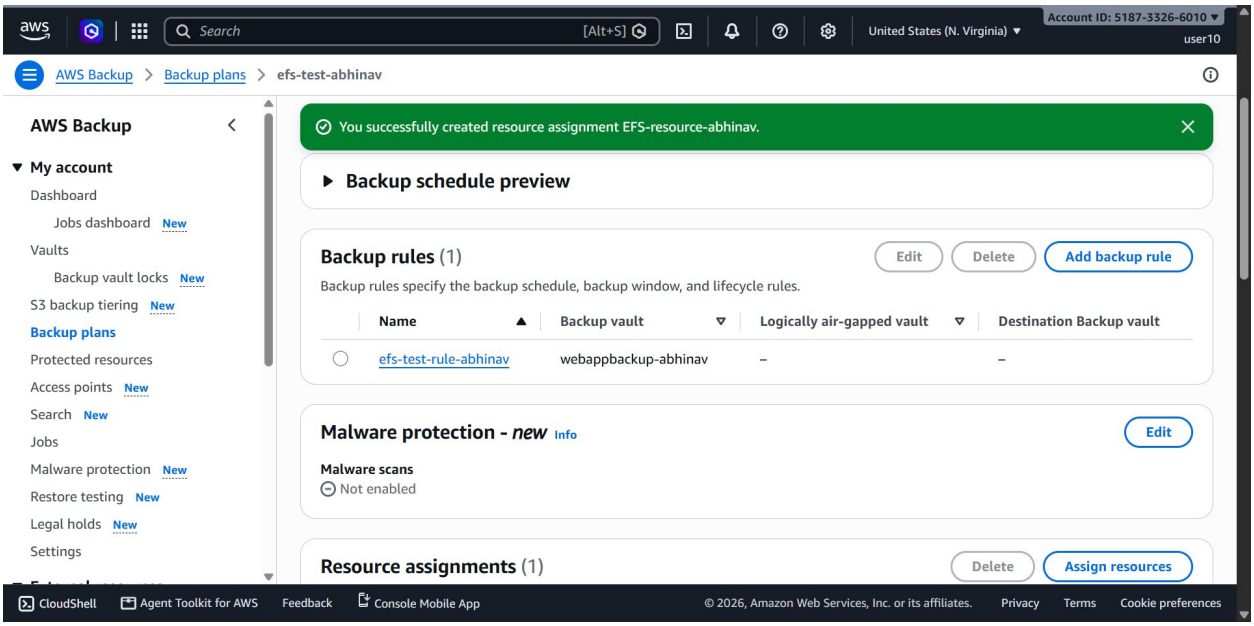

Created backup plan

successfully created resource assignment EFS-resource-abhinav.

Restoring From Backups to ensure there is no data recovery issues.
